

Enrique Martín Ocaña

Bicester, Oxfordshire

Software engineer with 4+ years experience in C#/.NET and React across Aston Martin F1 and Disney. Specialises in distributed systems, observability, and agentic AI. ScotlandIS Young Software Engineer of the Year 2023. UK Settled Status.

EXPERIENCE

- Aston Martin Aramco F1 Team**
Software Engineer
Graduate Software Engineer

Silverstone, UK
Sep 2025 – Present
Sep 2023 – Sep 2025

 - Built compute-intensive simulation systems in C# and .NET 8 processing race car telemetry across distributed infrastructure, handling ~2M telemetry events per session.
 - Designed internal APIs, CLI tools and orchestration layers managing complex simulation models and post-processing workflows at scale.
 - Led delivery of a rule-driven validation engine translating F1 regulatory constraints into deterministic evaluation code, adopted across the full simulation platform.
 - Introduced OpenTelemetry tracing and metrics into the Grafana/Loki stack, reducing mean time-to-diagnose from ~40 minutes to under 5 during race-weekend on-call windows.
 - Authored team-wide agentic AI coding standards — Claude/Cursor configuration, context-engineering patterns, AI code-review rubrics — adopted across a security-sensitive real-time codebase.
C#, .NET 8, React, GraphQL, MongoDB, InfluxDB, Kafka, Docker, Kubernetes, Azure DevOps, OpenTelemetry
- Santander Global Tech**
Software Engineer Analyst

Málaga, Spain
Apr 2023 – Sep 2023

 - Built Python data pipelines aggregating and normalising financial data from disparate systems, replacing manual Excel reconciliation for ~10 analysts.
 - Delivered internal dashboards (Dash/Plotly) giving finance and operations teams self-serve access to metrics previously requiring analyst requests.
Python, Pandas, Dash, Plotly, GitHub Actions
- The Walt Disney Company**
Technical Engineer Intern

London, UK
Jun 2021 – Jun 2022

 - Built internal tools in ASP.NET and React streamlining asset management and content delivery workflows across multiple Disney departments.
 - Refactored legacy C# backend services into a modular, clean-architecture pattern, measurably improving testability and extensibility.
 - Shipped accessibility improvements to React front-ends (ARIA standards) and supported rollout of CI/CD pipelines across internal applications.
 - Worked cross-functionally with content operations, legal and engineering to gather requirements and release tooling iteratively.

EDUCATION

- University of Strathclyde**
BSc (Hons) Software Engineering — Pass with Distinction; industrial placement at Disney

Glasgow, Scotland
Sep 2018 – Apr 2023

SKILLS

- Languages & Frameworks:** C#, .NET 8/10, TypeScript, JavaScript, React, Python, SQL, GraphQL
- Cloud & Infrastructure:** Azure, AWS, Docker, Kubernetes (AKS), Terraform, GitHub Actions, Azure DevOps
- Data:** SQL Server, PostgreSQL, MongoDB, InfluxDB, vector DBs (pgvector)
- Messaging:** Kafka, RabbitMQ, Azure Service Bus
- Practices:** TDD, Clean Architecture, SOLID, DDD, CI/CD, OpenTelemetry, Grafana, Loki, Agile/Scrum
- AI & Tooling:** Microsoft.Extensions.AI, Semantic Kernel, MCP (C# SDK), RAG patterns, Claude Code, GitHub Copilot

HONOURS & AWARDS

- ScotlandIS Young Software Engineer of the Year:** Winner, 2023
 - Charles Babbage Award, University of Strathclyde:** Winner, 2023 — best dissertation in the graduating cohort
- Spanish (native) · English C1 Advanced (Cambridge) · UK Settled Status · EU citizen (Spain)
